HEALTH THE **FUTURE** STATE

AON HEALTH SYMPOSIUM

14 SEPTEMBER 2017

Lunch is proudly sponsored by:

Welcome and introduction

Time	Agenda
1.00pm	Welcome and introduction <i>Mark Doepel, Partner, Sparke Helmore and Adjunct Associate Professor of Law</i>
1.15 – 1.55pm	“We said this!” The power of patient opinion and its influence on patient safety <i>Michael Greco, Associate Professor, Patient Opinion Australia</i>
1.55 – 2.35pm	“They said what?!” Managing your brand and reputation in the social media age <i>Greg Daniel AM, National Practice Leader, Social Media Intelligence, KPMG</i>
2.35 – 3.05pm	Mental health - the role work and workplace trauma may have in accelerating mental illness <i>Samuel Harvey, Associate Professor, Black Dog Institute</i>
3.05 – 3.35pm	Afternoon tea break
3.35 – 4.20pm	Cyber security risk: the Victorian public health sector <i>Poppy Economakos, Senior Risk Advisor, VMIA</i> <i>Rhiannon Hardwick, Risk Advisor, VMIA</i>
4.20 – 4.50pm	From Drones to Genomes <i>Paul Hirst, Executive Director, Kianza</i>
4.50 – 5.00pm	Aon wrap up <i>Kenneth Corcoran, Aon Health Practice Leader – Pacific</i> <i>Paul Gordon, Aon Hewitt Health Practice Leader</i>
5.00 – 6.00pm	Networking drinks and canapes

“WE SAID THIS!”

**The power of patient opinion and its influence on
patient safety**

Associate Professor Michael Greco

Founder and Chief Executive

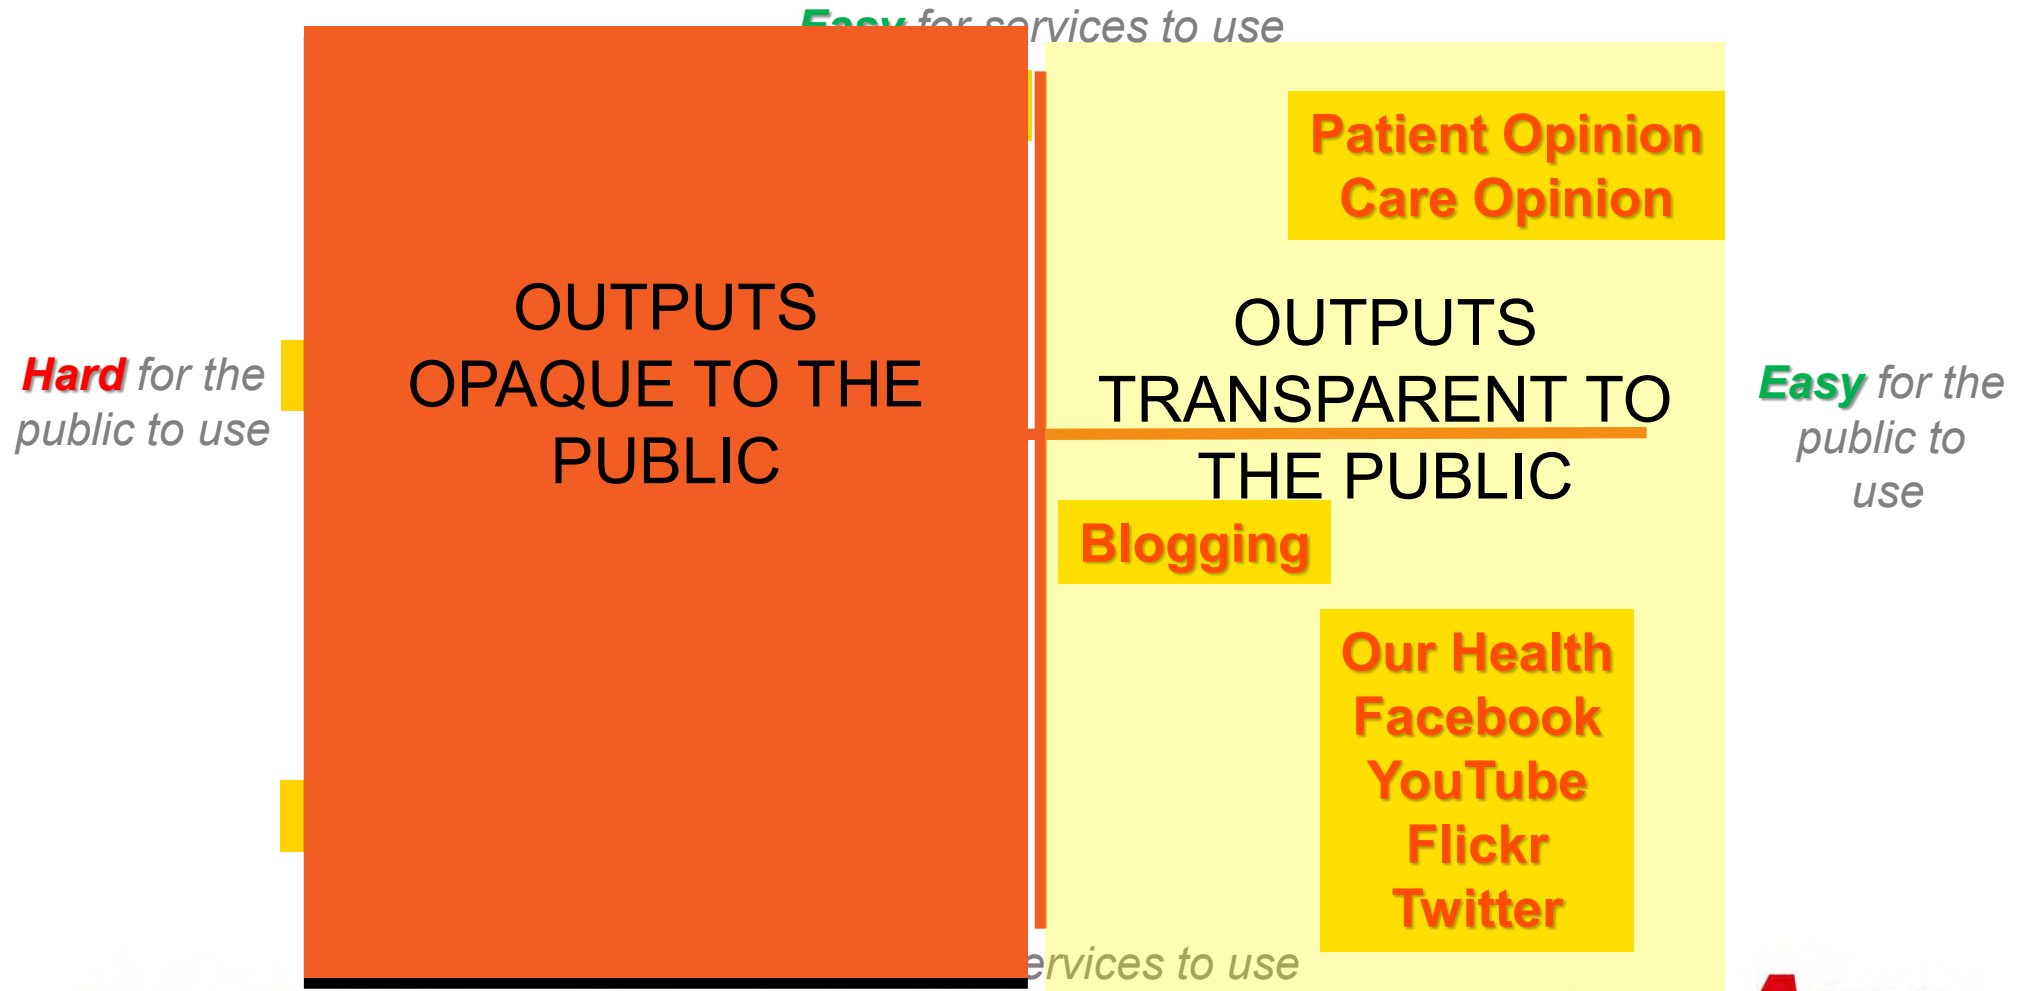

Patient Opinion Australia

What is Patient Opinion?

- We are not-for-profit, both here and in other countries
- Our mission is to make it safe and simple for people to ‘share their experience’ in a way that makes it easy for busy staff to connect with the authors of stories, and to learn from this type of feedback to help improve care.
- It’s about the power of stories to highlight safety and quality strengths and areas requiring further improvement

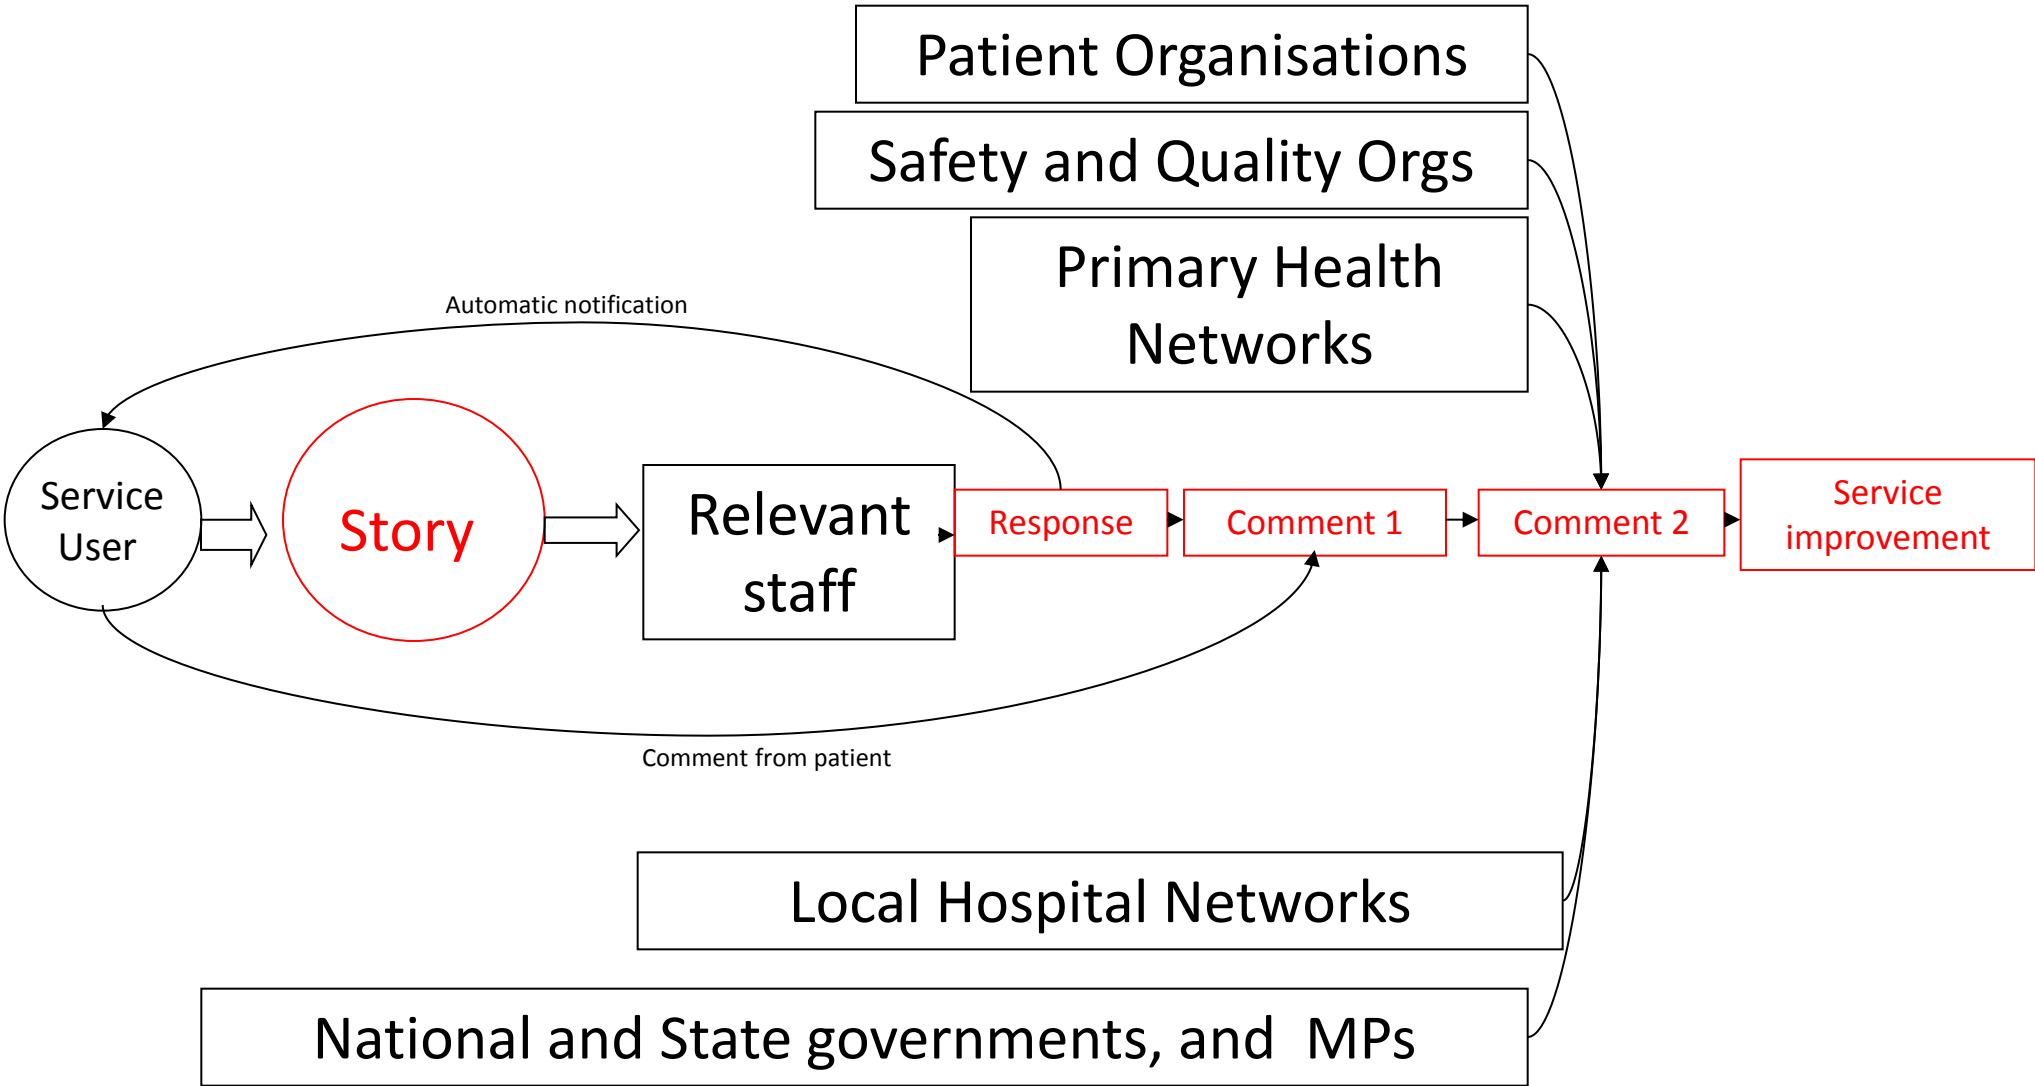

Engaging on whose terms?

Building relationships with your patients/consumers through public online engagement

What makes Patient Opinion so different?

- We aim to share stories with as many people as possible who can learn from it, and use it to make a difference.
- What patients/carers should know is that:
 - they shouldn't have to tell their story more than once
 - their story should be shared across the local health economy
 - their story should be available to people improving healthcare, whether locally, regionally or nationally
 - their story should help future healthcare professionals too
- Not only sharing stories, but seeing who has read them
- The more widely a story is read, the more impact it can create, and the more learning and change can result.

Conversations on Patient Opinion

Patient expectations of online feedback

- Independent – of being skewed
- Safe – stories are in ‘good hands’
- Responsive – opportunity for response
- Anonymous – care won’t be affected
- Public – more difficult to ignore
- Constructive – it’s about service improvement
- Accessible – easy to use

Example conversations leading to change

- Aboriginal woman left stranded

<https://www.patientopinion.org.au/opinions/64153>

This story from Kimberley Health highlighted lack of access to specialist healthcare which resulted in safety issues for the patient. The story led to changes being planned to access issues.

Share your experiences of Australian health services, **good** or **bad**.
We pass your stories to the right people to make a difference.

" Access To Specialist Healthcare in the Kimberley For Desert People. "

About: [Broome Health Campus](#)

Posted by [Mulan Man](#) (as [the patient](#)), 2 months ago

I am an Aboriginal man living in the remote desert area of Mulan Aboriginal Community in the Tanami Desert. I live with my elderly wife and extended family. Mulan is our home.

For people living in very remote communities such as ours, English is a second or third language. Communication with mutual understanding is vital.

I'm sharing this story about our recent healthcare experiences so that frail persons don't suffer as my wife did.

Recently my wife required a cardiac appointment in Broome. This involved a

Who has Patient Opinion told about this story?

Response from Margi Faulkner, Operations
Manager, Broome, WACHS - Kimberley 2 months
ago

No specific claim
has been made

▶ Response is **public**

Dear *Mulan Man*,

Firstly I want to apologise again for your wife's experience in Broome. It was very good of your friend to notify us of your wife's situation at the time, and I am pleased the PATS officer on the day was able to make contact with your wife and her escort to provide them with some refreshments and return tickets to Halls Creek. You are right, there was a communication issue in the arrangement of this trip, as the PATS staff had expected your wife to return to the PATS office directly after her appointment to retrieve her return ticket, but this was clearly not your wife's expectation. We will work to improve this communication.

I would also like to thank you very much for engaging with us in this forum to share your story, which was clearly distressing, and yet also includes suggestions for improvement. Your story is a great example of what a forum like this can bring to the planning and delivery of health services.

The WA Country Health Service aims to provide care closer to home,

Carmen Morgan, Kimberley Regional Director of Nursing and Midwifery

▶ Response is **public**

Having dialysis at the towns means that people have to leave country, have to leave community, for treatment medicine.

This means many of their family will follow them, and that brings other problems like drinking and bad social things.

Bidyedanga has a dialysis place, as do Kiwirrkurra and Yuendumu, and it has stopped many other problems, mainly people being close to alcohol and other things.

Someone needs to look at the "big picture", by putting the dialysis medicine in other communities, there will be a lot saved.

Response from [David Gaskell](#), Regional Medical Director, WA Country Health Service [last month](#)

🔄 We have made a change

▶ Response is **public**

Dear *Mr Mulan Man*

We've had opportunity to talk together recently which I've valued.

Thanks to your help, I want to share here some of the changes we've made in improving our health services.

As you know, the Patient Assisted Travel Scheme (PATS) provides travel and accommodation subsidies to patients for whom specialist care is not locally available.

PATS is State-funded with one policy for all WA. All PATS staff are required to follow these State-wide rules. They seek to ensure a safe and planned journey when transporting clients from home to a health service and back.

PATS policy ensures that vulnerable patients can choose a family member as escort to accompany them. This escort is responsible for assisting the patient throughout the journey. Roles include assistance in communication, physical support, need for encouragement, and help with cultural needs. You have pointed out that some aboriginal people speak other languages more fluently than English (like Kukatja). PATS

Dear *Mr Mulan man*

We would like to thank you again for sharing your story on Patient Opinion.

In regards to having access to dialysis closer to your home, we would like to reassure you and the community that WACHS Kimberley has been working collaboratively with other inter-government agencies for

Example conversations leading to change

- CEO indebted to patient's relative:

<https://www.patientopinion.org.au/opinions/62059>

This story had huge impact on CEO and staff. As a result, accessing enough copies of book to provide one to all clinicians and hopefully over time, to all staff. Plus looking at how to provide the type of communication training mentioned in the book

" Need for better communication when a family member is dying. "

About: Sale Hospital

Posted by [Such a loss](#) (as a relative), 6 months ago

A year or so ago my elderly father was admitted to the Gippsland Base Hospital with severe cellulitis. I made the trip from interstate to visit him in hospital and to assist my elderly mum who can only get around using a 'wheely-walker' or wheelchair.

When I saw Dad in the hospital his breathing was laboured and bubbly. His leg infection was very red, swollen and so painful that he could not bear to have the sheets resting on it. He constantly pushed the sheet off and lay uncovered on the bed. He was, mercifully asleep much of the time.

When I brought Mum in to visit Dad she asked if the nurse could organise a frame or leg cradle to go over Dad's legs so that he would not be so cold and uncovered or have to bear the pain from the sheet touching his leg. The nurse arranged some pillows to raise the sheet but the next day the pillows were gone

- [Respect for](#)

What could be improved?

- [bad service](#)
- [busy](#)

After I picked up Dad's belongings from the hospital I found that the hospital staff person who had packed up my Dad's things had not bothered to put my Dad's heavily soiled pyjama top into a plastic bag before putting it into his overnight bag. I guess the hospital staff were too busy...

Too busy to put his soiled pyjama top into a plastic bag first.

Too busy to ask to speak to or even ring my Mum to let her know that her husband was dying.

Too busy to ask me to sit down somewhere private before asking me to decide whether to treat or let my father die.

Too busy to sit down with my Mum and I to explain how it goes when someone is dying.

Too busy to get a frame that will keep the sheets of Dad's leg or to make a note about this.

Too busy to ask if we are OK or if we have any questions.

Too busy to offer any palliative care, services or support.

One of the nurses on the ward said to me later when I went back for Dad's things: 'It's harder for family because, while we see this a few times a week, it's all new to you.'

Death is not 'business as usual' for family members.

Hi Frank,

Thank you for your response and for the empathy and kindness shown to us at the launch of the registration of the Central Gippsland Health Service with Patient Opinion Australia.

Sale Hospital is fortunate to have a CEO with the courage, humility and leadership to turn a negative into such a huge positive.

Sale Hospital has a great leadership team and Jude did a remarkable job in organising the event and explaining the process and benefits of the Patient Opinion website.

Thank you all so much!

From *Such a loss* and family.

Hi *Such a loss* and family

We are indebted to you and your mum for coming to our health service and personally telling us your story. It had a huge impact on me and I believe everyone present. Thank you for being so kind and understanding of us.

I am also very appreciative of the book you gave me "Dying for a Chat". This also had a profound impact on me and I wonder why I have not come across it before.

I am in the process of accessing enough copies to provide one to all of our clinicians and hopefully over time, to all our staff. A copy will also be given to all new staff as part of our orientation program.

We are also looking at how we can provide the type of communication training referred to in the book, for all of our staff.

Your story has had such a positive impact on us and I am absolutely confident it has made a difference for our patients already and even more so, in the future.

With heartfelt thanks

Frank and co @ Central Gippsland Health Service

Key points

- Feedback should be about resolving issues, restoring relationships, and reducing complaints in ‘real-time’
- We seem to be collecting a lot of data on patient experience (focus more on metrics) with little evidence of change
- Many of our feedback systems are one-way (it’s about what the system wants) rather than two-way where consumers ‘feel heard’ and can see the outcome of their feedback
- If you are collecting patient feedback and not sharing it with all staff, then you will struggle to change culture.
- Feedback should be more about staff learning rather than driving consumer choice (different from TripAdvisor approach)

MEDIA RELEASE

Aon breaks new ground in online risk management

SYDNEY, 27 January 2010:

Leading risk management firm Aon Australia, has partnered with leading risk assessment firm, SR7 to provide its clients in Australia with social media intelligence, insight, analysis and risk assessment.

Through its annual benchmarking research, Aon Australia has identified Australian organisations are more concerned than ever about the risk of damage to brand image and corporate reputation.

In the past twelve months, there has been an increase in the volume of damaging material emanating from social media and then rapidly migrating to traditional media, with significant financial consequences for the reputation of brands.

Jason Disborough, Chief Commercial Officer of Aon Australia, said "Our partnership with SR7 will provide our clients with a holistic service allowing them to identify, assess and manage the threats of online reputational damage as well as build on opportunities as they arise."

"By auditing and monitoring social media platforms on a 24/7 basis and offering comprehensive analysis and reporting of the data, SR7 provides protection in the form of an early warning system and the intelligence to deal with social media risks," Mr Disborough said.

KPMG's Tool Evaluation Framework

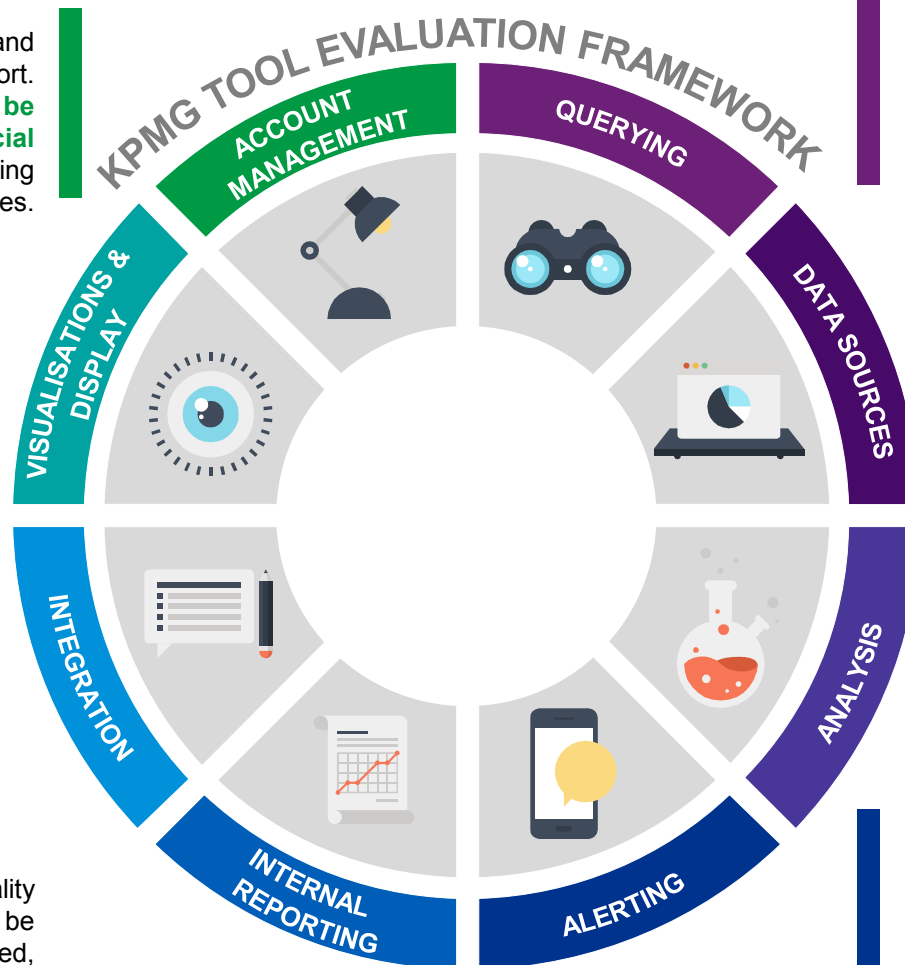

KPMG uses a specialist developed methodology in the evaluation of tools, in presenting an objective of the appropriateness of tools. There are eight broad measures upon which tools evaluated principally against tool capability. These measures are compared against cost and factors unique to the particular business. Under these eight broad measures, are 32 specific values upon which a tool is assessed.

Tools are difficult to manage, and occasionally will require service support. **Account management should be immediate and to the point, like social media**, and assist you actively in achieving objectives.

A reality of tools' effectiveness is in their presentation of data, and how intuitively the layman can draw findings. The visual appeal of the tool is also in attracting an interested audience.

Tools should be able to integrated with business objectives and systems and team structures. **Good tools make these allowances for preferences** and enable data to be exported so as to be appropriated for any purpose.

Ongoing and campaign reporting functionality can ensure that fair comparisons can be made, accountability can be demonstrated, and improvements can be actioned.

The query is the starting point of an social media analysis. **To draw the best quality information, the query mechanism must be clear and customizable** to ensure that searches can recall a broad scope of mentions, but still be precise.

Good access to a breadth of social media sources is important in considering a rounded view of social media data. Sources refer not only to access to certain platforms, but also what kinds of mentions within platforms are included.

Being able to analyse data in ways that are applicable to your business is critical in drawing findings fit for action. **The clarity of analysis, the relevance of features and the ability to work within the platform** are critical success factors.

Alerting is a critical pillar of value of confidence in a tool. **Establishing a simple alert that meets relevant criteria and is dependable assists teams** in commencing more thorough analysis and/or making new communications.

Service Methodology: Social Media Research

Social media is a vast and valuable data source

Social media is a vast data source, an open ended and vibrant medium where people have been contributing information for over ten years.

From a research perspective, social media offers a significant opportunity to understand dominant trends in activity, perceptions and experiences. Social media allows for organisations to access this intelligence in a way that is fast, cost-effective and which can reach individuals in inter-state or international jurisdictions. Social media research should be divisible into geo-locations or personas so that the data can support sophisticated marketing models.

Research on social media is highly impactful, but it requires considered and professional approaches to ensure that a wide range of views are considered and that certain searches don't necessarily bias results. The challenge is to synthesize large and unstructured data sets into simple thematic trends, and provide the client with actionable insight, not just more data.

Best applications of social media data involve using it to improve social, digital and broader communications, ensuring quality in existing products and experiences, and opening new potential product lines.

Our methodology

KPMG uses a unique hybrid methodology combining leading tools with specialist consultants to deliver high impact work, and assist our clients in achieving positive business outcomes.

Understand

KPMG works with the client to set a vision for key business questions and problems that the social media research will address:

- Are there existing data structures or business frameworks that we can feed social media into, or analyse against?
- What is the intended use of this information?
- Are there any hypothesis at play that should can be corroborated or called into question?

Design

KPMG considers the breadth of social media information using desktop research and our specialist social media and sector experience to design a logical and objective process:

- What search terms and query strings are appropriate here?
- What types of social media data should we research?
- How can we ensure that we get access to the most important data?
- How can we present this information that meets the objectives of the research and aligns with the client?

Research

KPMG's analysts use automated tools like NUVI and investigative techniques to produce and categorise data in such a way that analysis can occur:

- What are we seeing in relation to this topic? What are the dominant themes of conversation by volume? What is the sentiment around those? Who is influencing perceptions?
- Does this differ from the client's hypothesis?

Insight

KPMG's consultants piece together the information to real give actionable insights for the client to use:

- What does this mean for the client?
- How should they change their social media program or broader organisation in light of this information?
- How can the client repeat this process, or tap into it so that this continues to be valuable for the future?

HSE Management Standards Approach

The six Management Standards cover:

Demands – includes workload, work patterns and the work environment.

Control – how much say a person has in the way they do their work.

Support – includes the encouragement, sponsorship and resources provided by the organisation, line management and colleagues.

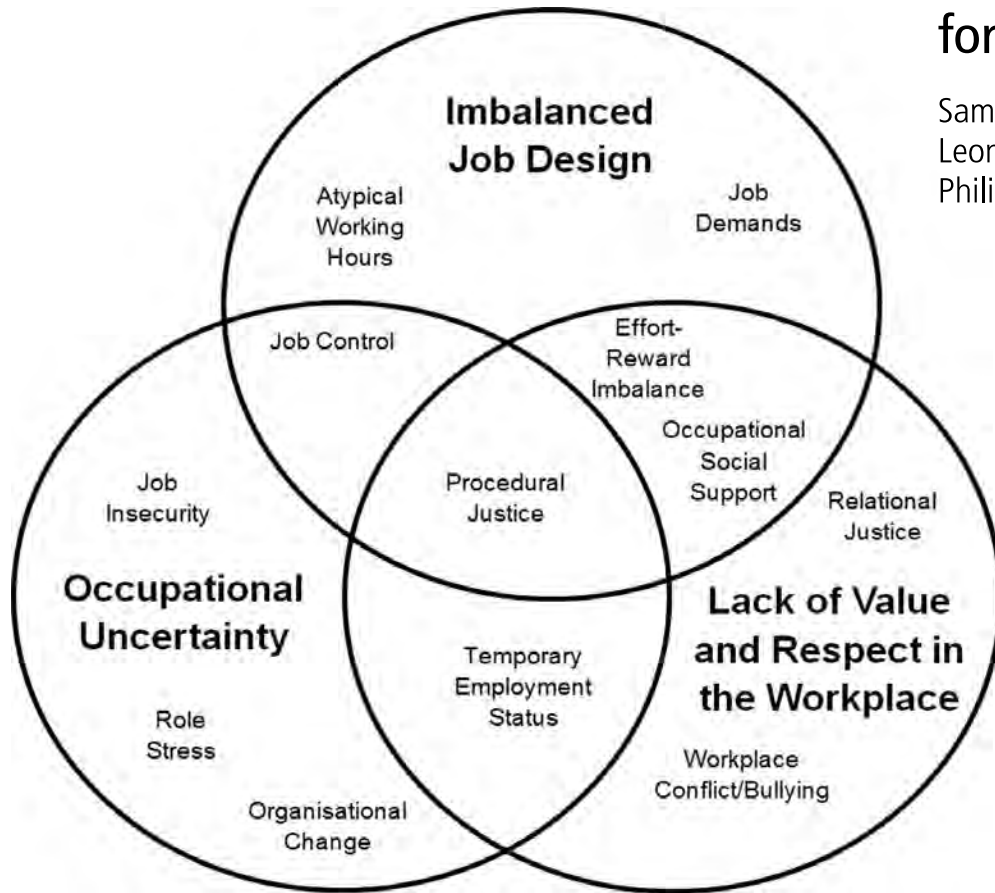

Role – whether people understand their role within the organisation and whether the organisation ensures that they do not have conflicting roles.

Change – how organisational change (large or small) is managed and communicated in the organisation.

Relationships – promoting positive working to avoid conflict and dealing with unacceptable behaviour.

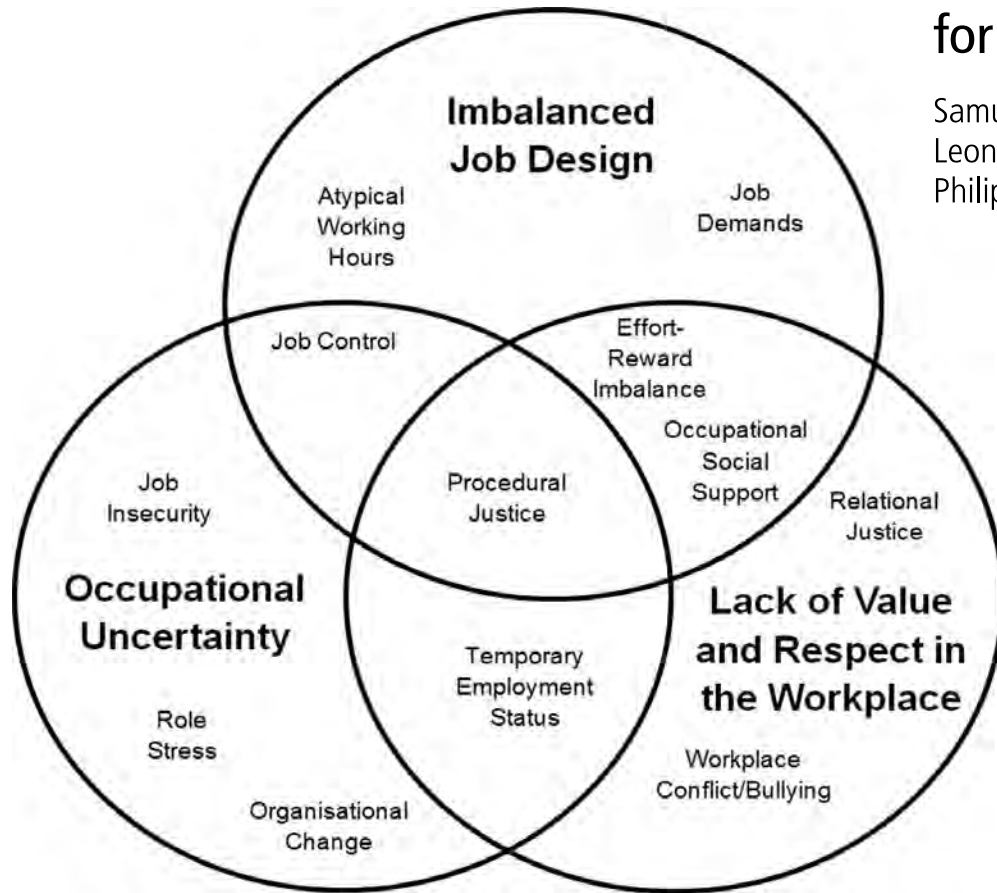

Can work make you mentally ill? A systematic meta-review of work-related risk factors for common mental health problems

Samuel B Harvey,^{1,2,3} Matthew Modini,¹ Sathbh Joyce,¹ Josie S Milligan-Saville,¹ Leona Tan,¹ Arnstein Mykletun,^{4,5,6} Richard A Bryant,⁷ Helen Christensen,² Philip B Mitchell^{1,2}

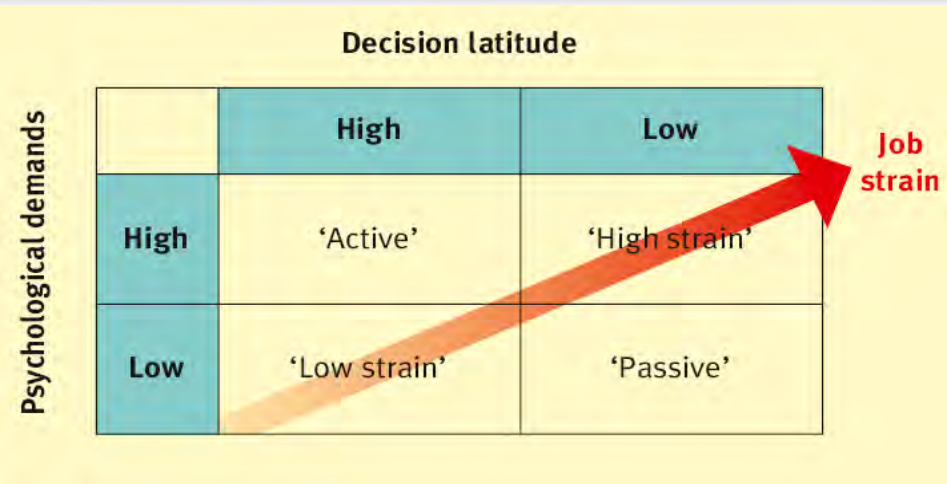

Can work make you mentally ill? A systematic meta-review of work-related risk factors for common mental health problems

Samuel B Harvey,^{1,2,3} Matthew Modini,¹ Sadhbh Joyce,¹ Josie S Milligan-Saville,¹ Leona Tan,¹ Arnstein Mykletun,^{4,5,6} Richard A Bryant,⁷ Helen Christensen,² Philip B Mitchell^{1,2}

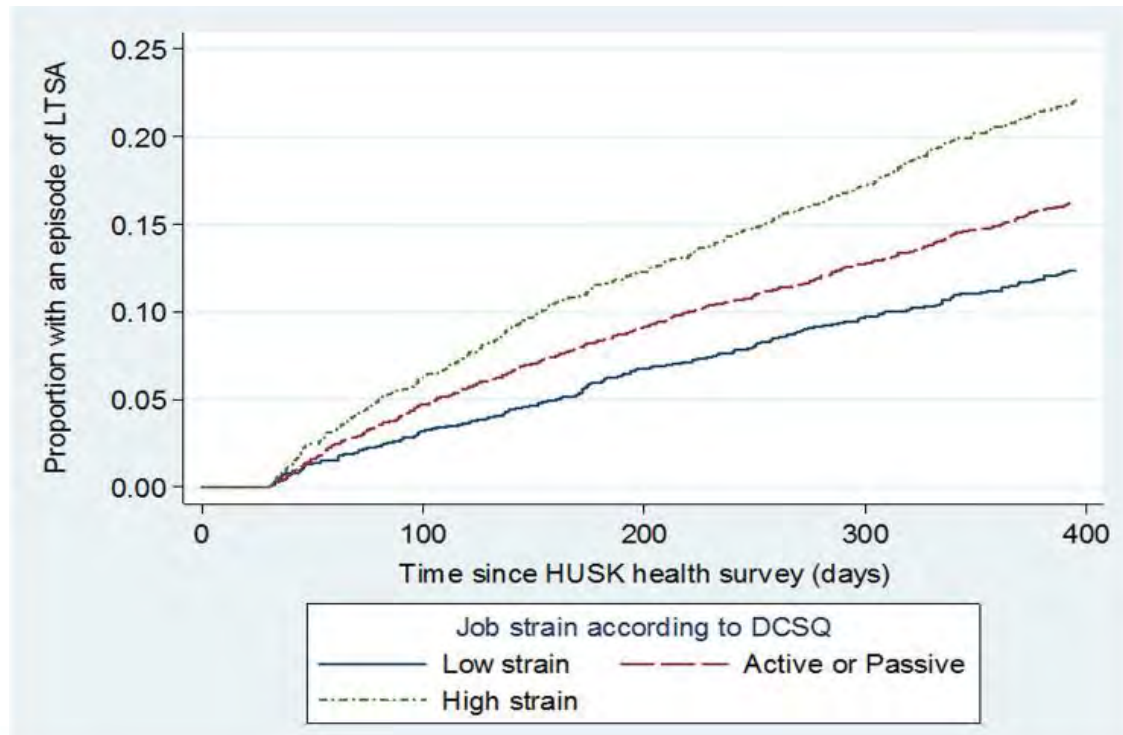

But...in order to really understand the relationship between work and mental health, need to think about a combination of factors

The combination of high demand and low control associated with increased risk of mental illness

Modeling suggests 1 in 7 cases of common mental disorder could be prevented if this combination eliminated

Same combination of high demand and low control associated with increased risk of long term sickness absence.

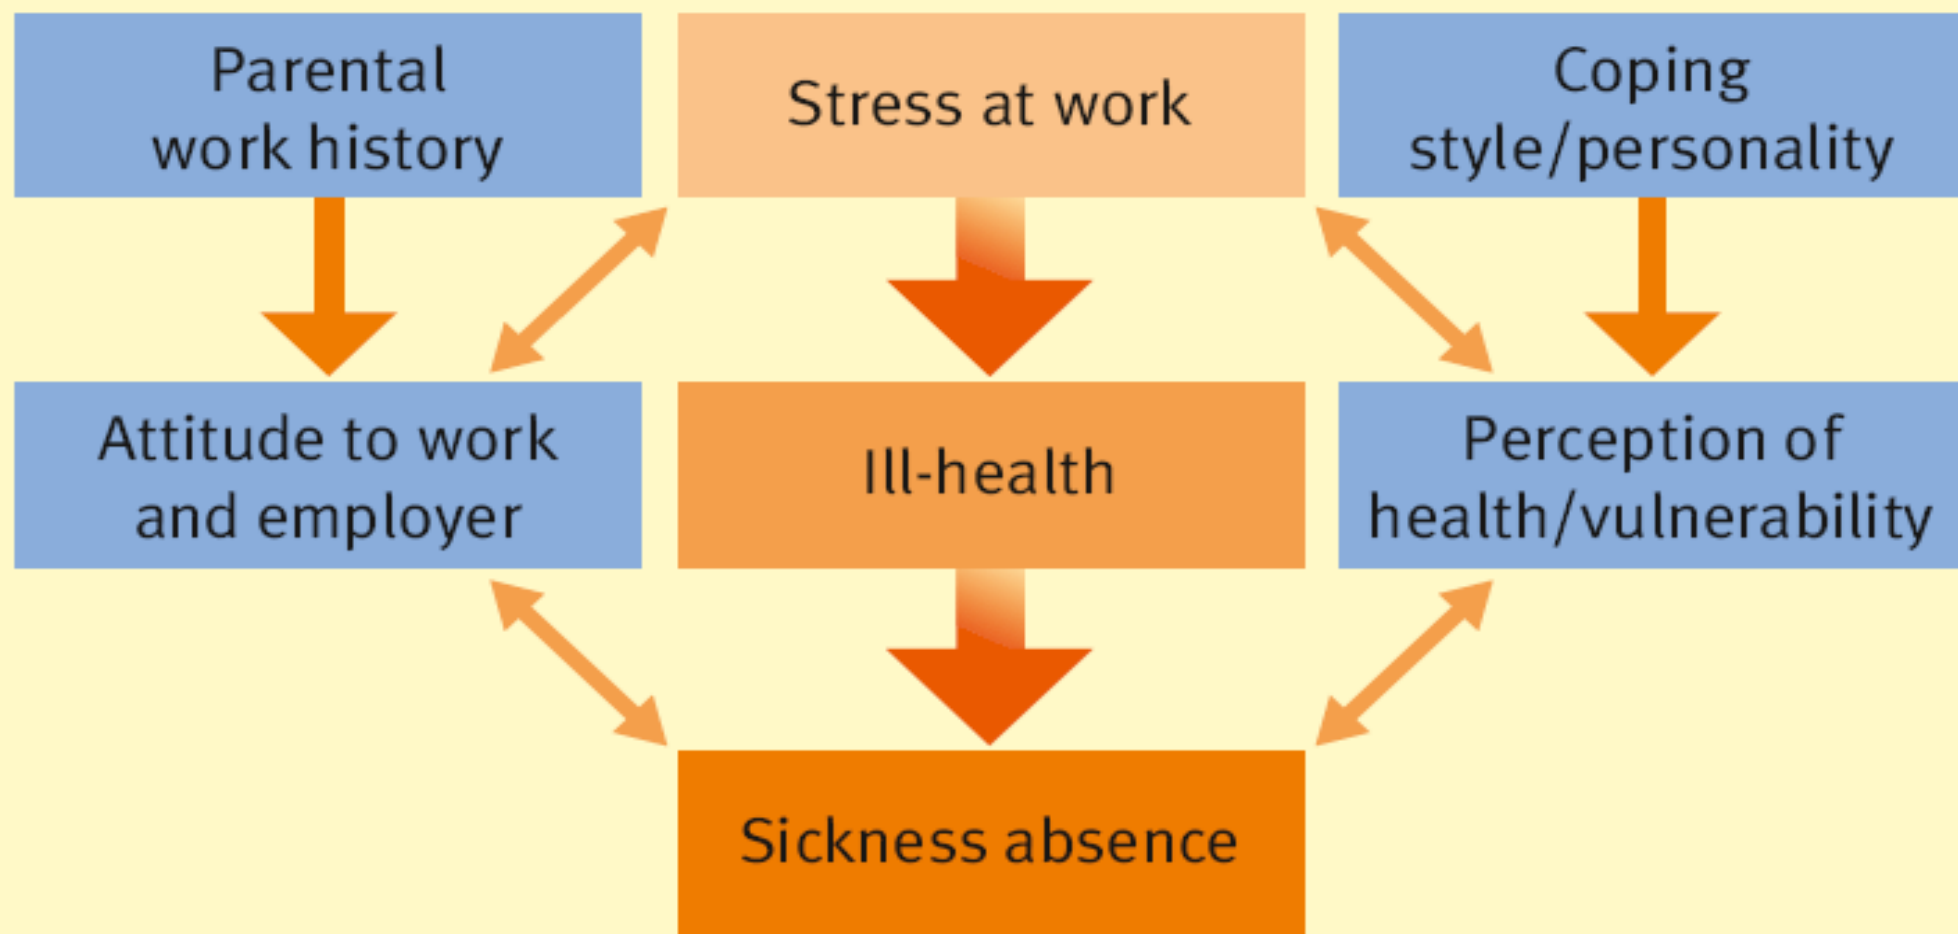

Childhood temperament and long-term sickness absence in adult life

Max Henderson, Matthew Hotopf and David A. Leon

- 12 000 primary school children in 1962
- Child parental and teacher interviews
- Re-established in 1999
- 98% traced – sent q'aire in 2001
- Asked about employment status – in particular if “Permanently sick or disabled”
- Data available on 6852 individuals

Variable / Subvariable		Adjusted for sex, year of birth, IQ aged 7, fathers social class	
		OR (95% CI)	P (trend)
“Often complains of pains and aches”	“No”	1.0	p<0.001
	“Somewhat”	2.07 (1.26,3.42)	
	“Certainly”	4.66 (2.04,10.68)	
“Often appears miserable, unhappy, tearful or distressed	“No”	1.0	P= 0.03
	“Somewhat”	1.0 (0.67,1.51)	
	“Certainly”	4.65 (2.13,10.15)	
“Tends to be absent from school for trivial reasons”	“No”	1.0	p=0.007
	“Somewhat”	1.71 (1.10,2.66)	
	“Certainly”	1.88 (0.88,4.05)	
“Tends to be fearful or afraid of things”	“No”	1.0	p = 0.90
	“Somewhat”	0.90 (0.66,1.24)	
	“Certainly”	1.68 (0.87,3.23)	

A more complicated model of how workplace stress may interact with individual factors and contribute to ill-health and sickness absence

Need to consider the balance of risk factors

Workplace risk factors

Workplace protective factors

Non-work factors

Individual attributes

Key questions

1. Why is everyone talking about mental health in the workplace?
2. How do workplace factors impact on mental health?
3. What does the latest research suggest we should do?
4. What type of workplace interventions are effective?
5. What can we learn from research in high risk industries?

Why bother with research?

- Things that seem like a good idea have a history of not working or having unexpected consequences (e.g.) debriefing, back education, pre-deployment education
- We now have a suite of interventions that do have an evidence base or are evidence-informed

CREATING MENTALLY HEALTHY WORKPLACES

A REVIEW OF THE RESEARCH

THE MENTALLY HEALTHY WORKPLACE ALLIANCE

UNSW

MENTAL ILLNESS IS ONE OF THE LEADING CAUSES OF SICKNESS, ABSENCE AND LOW-LEVEL WORK CAPACITY IN AUSTRALIA.

AT ANY POINT IN TIME, ONE IN SIX WORKING AGE PEOPLE WILL BE LIVING WITH MENTAL ILLNESS, COSTING AUSTRALIAN BUSINESSES IN THE VICINITY OF \$1 BILLION DOLLARS EACH YEAR. MEANWHILE, MANY ARE ALSO CARING FOR AND SUPPORTING PEOPLE WITH MENTAL HEALTH DIFFICULTIES WHILE Juggling WORK AND HOME RESPONSIBILITIES.

A NEW REPORT FOR THE NATIONAL MENTAL HEALTH COOPERATION AND THE MENTALLY HEALTHY WORKPLACE ALLIANCE OFFERS AUSTRALIAN BUSINESS LEADERS NEW WAYS TO SUPPORT THE MENTAL HEALTH OF EMPLOYEES AND IMPROVE THE PERSONAL AND ECONOMIC BONES OF MENTAL HEALTH. THE REPORT BRINGS LEADING MENTAL HEALTH AND BUSINESS EXPERTS TOGETHER TO LOOK AT THE EVIDENCE OF WHAT WORKS.

OVERVIEW

A mentally healthy workplace is achievable for all organisations, but requires a genuine, continuous commitment across all levels of the workplace.

The majority of mental illness occurs in the workplace, it is treatable and in some cases may be preventable. Structures and workplaces can play an active role in maintaining the health and wellbeing of their workers as well as supporting the recovery of staff with mental health problems and the caring role that so many people play.

Individuals themselves identify work as providing a sense of purpose, recognition within society, and opportunities for development, therefore playing a pivotal role in a person's recovery.

Developing a mentally healthy workplace requires an understanding of the key levels of job design, team and organisational factors, combined with formalised policies and individual factors.

Work performance is highest when staff report high levels of psychological well-being and job satisfaction.

Business leaders need to think of workplace mental health as being an ongoing priority, not beyond simply getting a policy in place for providing a range of targeted services that promote mental health.

EMPLOYERS SHOULD FEEL EMPOWERED TO MAKE CHANGES WITHIN THEIR WORKPLACE TO MAKE THEM MORE MENTALLY HEALTHY

...HAVING A HEALTHY WORKFORCE IS FUNDAMENTAL TO THE SUCCESS OF ANY BUSINESS...

RESEARCH SHOWS THAT COMPANIES THAT HAVE MENTAL HEALTH CONDITIONS ARE OFFERING AUSTRALIAN BUSINESSES IN THE VICINITY OF \$1 BILLION DOLLARS EACH YEAR. PRODUCTIVITY, INCREASED TURNOVER RATES AND EMPLOYMENT GROWTH.

GOOD MENTAL HEALTH IS GOOD FOR BUSINESS

There is clear evidence that effective mental health services reduce EE in benefits to the organisation.

THE MENTALLY HEALTHY WORKPLACE ALLIANCE

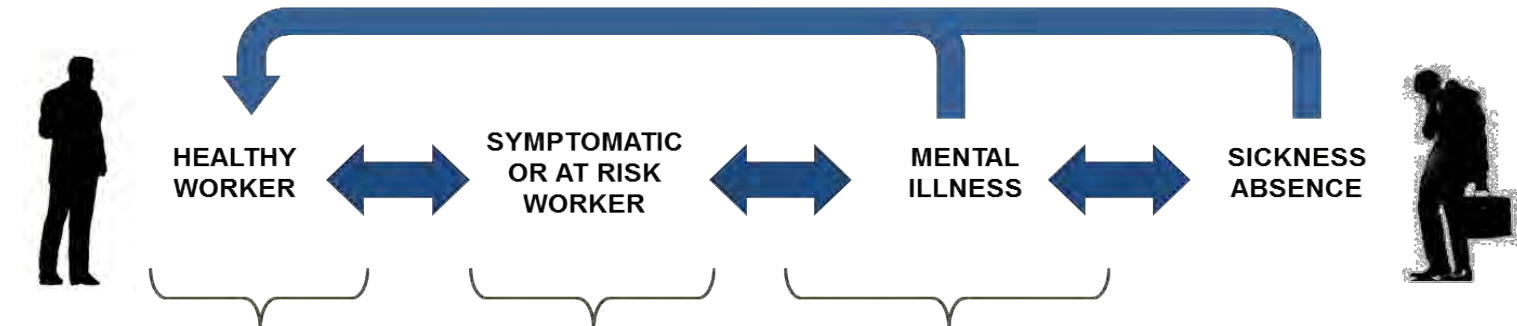

TAKE CARE OF BUSINESS

The Mentally Healthy Workplace Alliance is a new national approach by business, community and government to encourage Australian workplaces to become mentally healthy for the benefit of the whole community and businesses, big and small.

MENTAL HEALTH AND WELLBEING STRATEGY FOR FIRST RESPONDER ORGANISATIONS IN NSW

HEALTH: THE FUTURE STATE
AON HEALTH SYMPOSIUM 14 SEPTEMBER 2017

Development of evidence-based workplace interventions for first responders in NSW

- Could we come up with new ways to prevent some cases of mental illness?

What factors were important for emergency workers?

Workplace risk factors

Workplace protective factors

Non-work factors

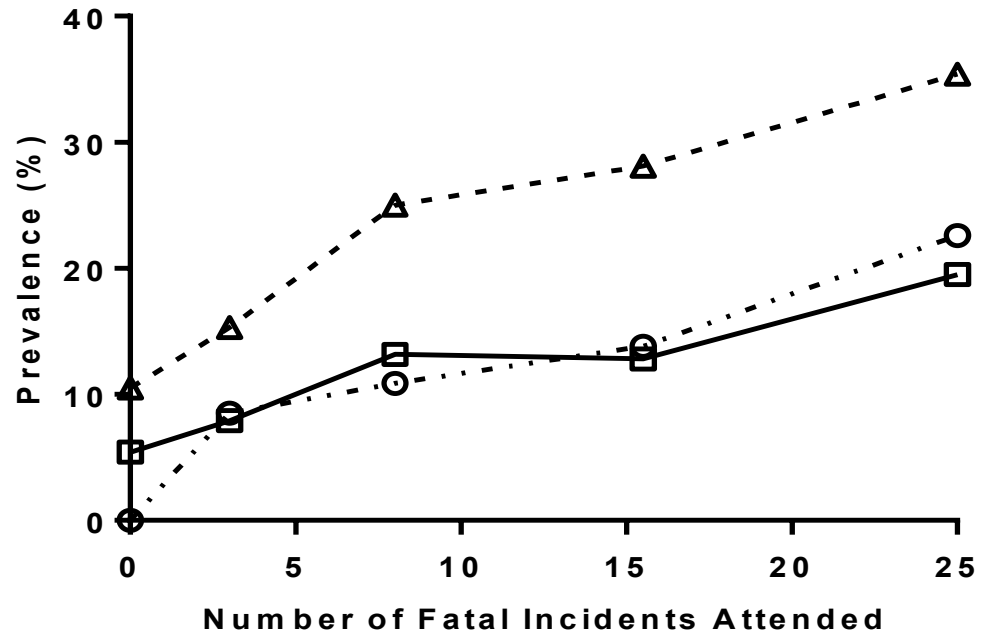

Individual attributes

Factors we looked at amongst first responders

ESW that had attended more than twenty incidents more than one in five had symptoms consistent with similar numbers reporting depression and [1]. These results are similar to estimates from represent a prevalence of symptoms far in excess

Workplace risk factors

The mental health burden faced by ESW creates and for society more generally. ESW dominated related mental illness claims, with police officers top seven occupations for workers' compensation Wales, injured police officers alone have been

Factors we looked at amongst first responders

Workplace
protective
factors

Types of critical incident support	M (SD)
Discuss event with colleagues	4.3 (0.9)
Discuss event with family/friends	4.3 (0.9)
Own space and time	3.8 (1.1)
Operational debriefing	3.7 (1.2)
Critical incident debriefing	3.6 (1.2)
Formal support (e.g. chaplain or peer support)	3.3 (1.3)
Socialise with family/friends	3.3 (1.3)
Socialise with colleagues	3.0 (1.2)
Professional support separate from FRNSW	2.9 (1.4)

What factors were important for emergency workers?

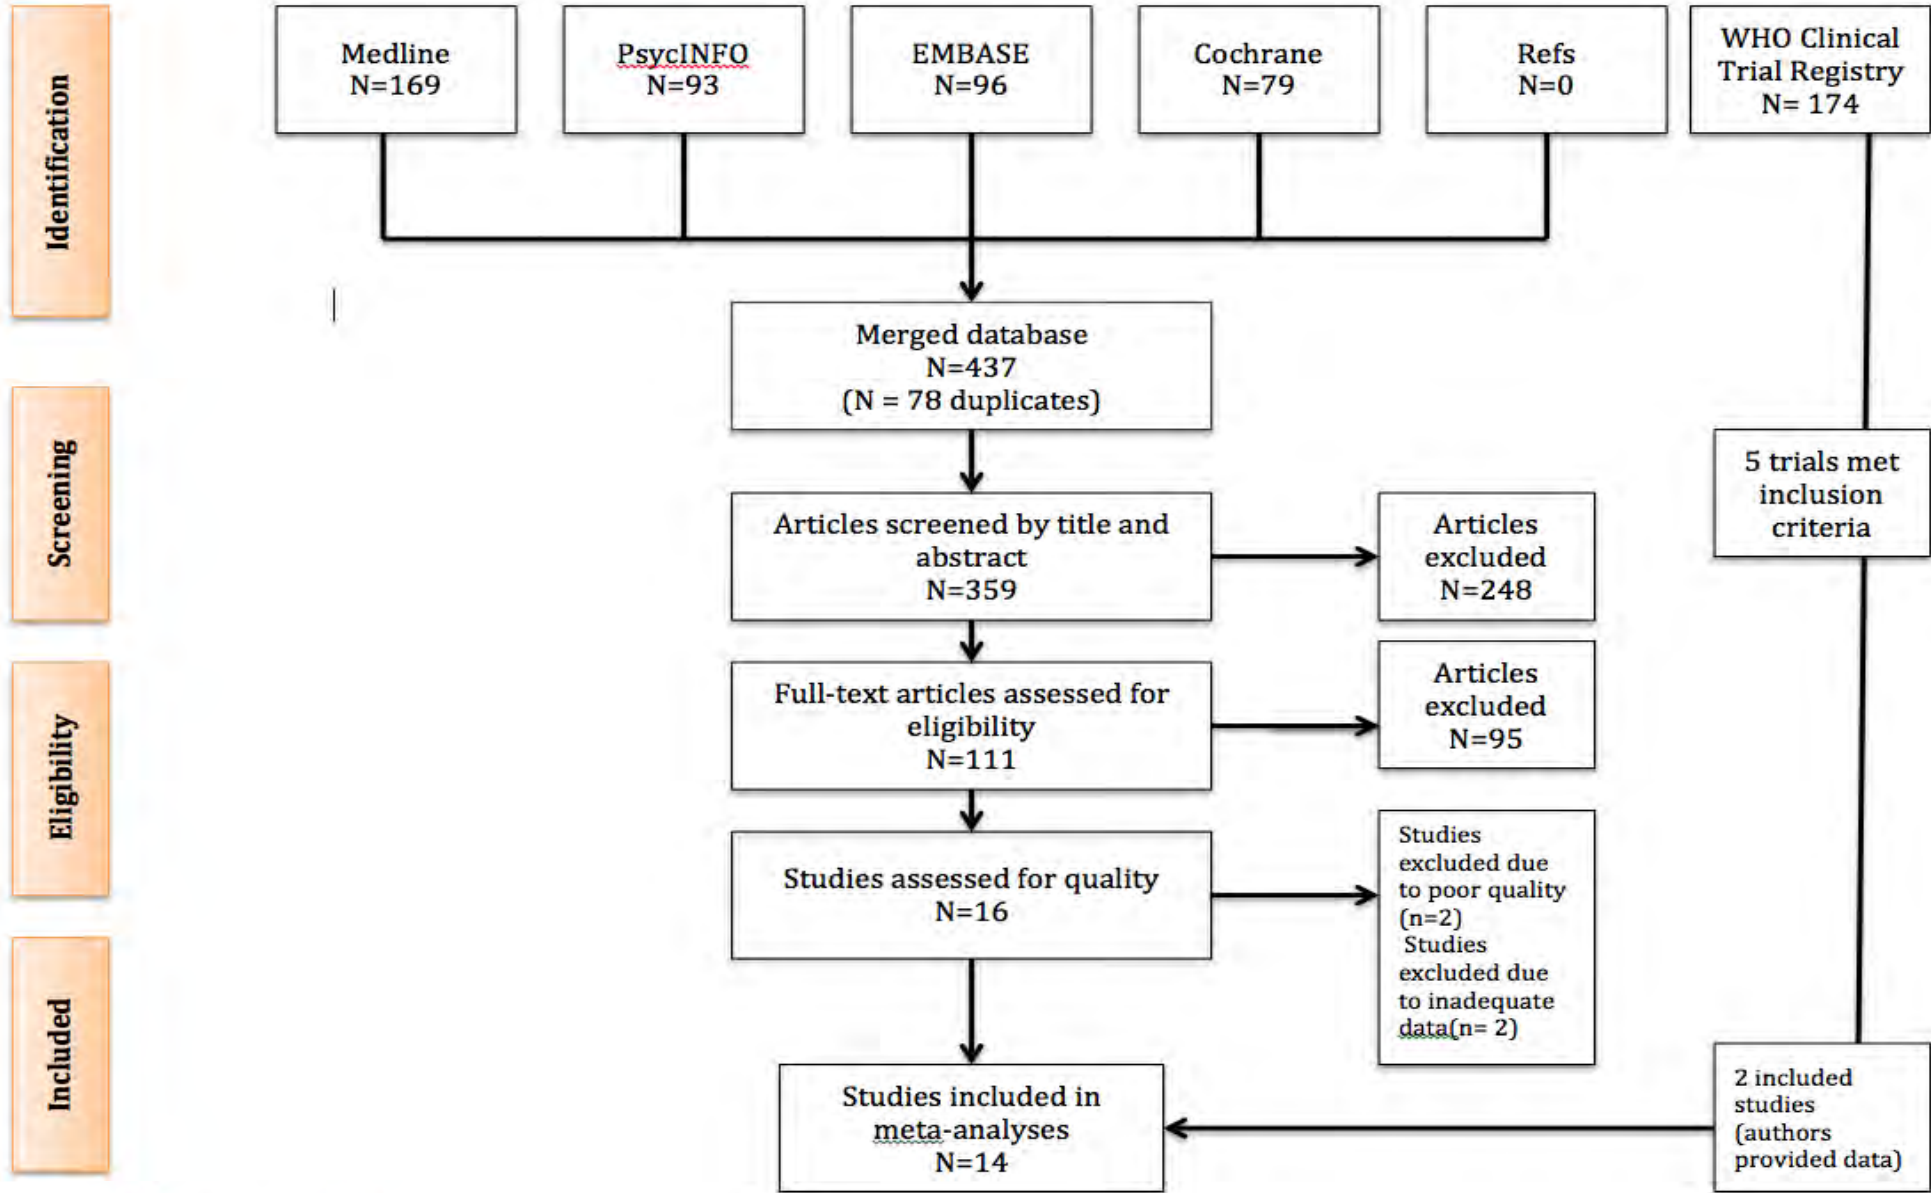

How can we measure and then increase the resilience of emergency service workers?

Are now validated resilience scales (e.g. Connors Davidson Resilience Scale (CD-RISC))

Prospective study of new paramedic recruits. CD-RISC predicted future mental health problems

Key question: Can you increase someone's resilience?

Individual
attributes

What the evidence tell us...

- Certain types of resilience training are beneficial, in particular interventions utilising Mindfulness or CBT techniques
- Need skill development (not one off sessions)

RAW – Resilience@Work

- Developed based on mindfulness and CBT principles
- Brief, engaging weekly exercises
- Focused on developing practical skills
- Backed up with podcasts and other information
- Randomized controlled trial amongst NSW emergency service staff

Resilience@Work (RAW) Mindfulness Program | Audio | Course Map | Bookmark | Email | Menu | Exit

Session 1: Resilience & Mindfulness

Stress and Mindfulness

Mindfulness can help you beat stress. [Watch Dan in this video and listen to Sarah to see how.](#)

Beat Stress with Mindfulness!

- Mindfulness is an effective way to step back from stressful, unhelpful thoughts
- Helps you to drop the tug-of-war battle with the STRESS Monster
- Enables you to refocus and put your energy into the people and activities that matter most to you

Progress: Next is the second mindfulness workout which we conduct with Dan. Back Next

Pilot data on RAW

Minimum number of Sessions Completed	Percentage of sample
1	100% (n=29)
2+	72% (n=21)
3+	55% (n=16)
4+	48% (n=14)
5+	48% (n=14)
6	38% (n=11)

Resilience (as measured by the CD-RISC) increased...very exciting result

Resilience@Work (RAW) Mindfulness Program | Audio | Course Map | Bookmark | Email | Menu | Exit

Development of evidence-based workplace interventions for first responders in NSW

- Could we come up with new ways to help prevent some cases of mental illness?

Development and validation of a prediction algorithm for the onset of common mental disorders in a working population

Ana Fernandez^{1,2}, Luis Salvador-Carulla¹, Isabella Choi³, Rafael Calvo⁴, Samuel B Harvey^{5,6} and Nicholas Glozier³

Now have a risk algorithm for men developing common mental disorder that works as well as the most popular cardiovascular risk algorithms

Allows interventions to be targeted and highlights how risk can be altered

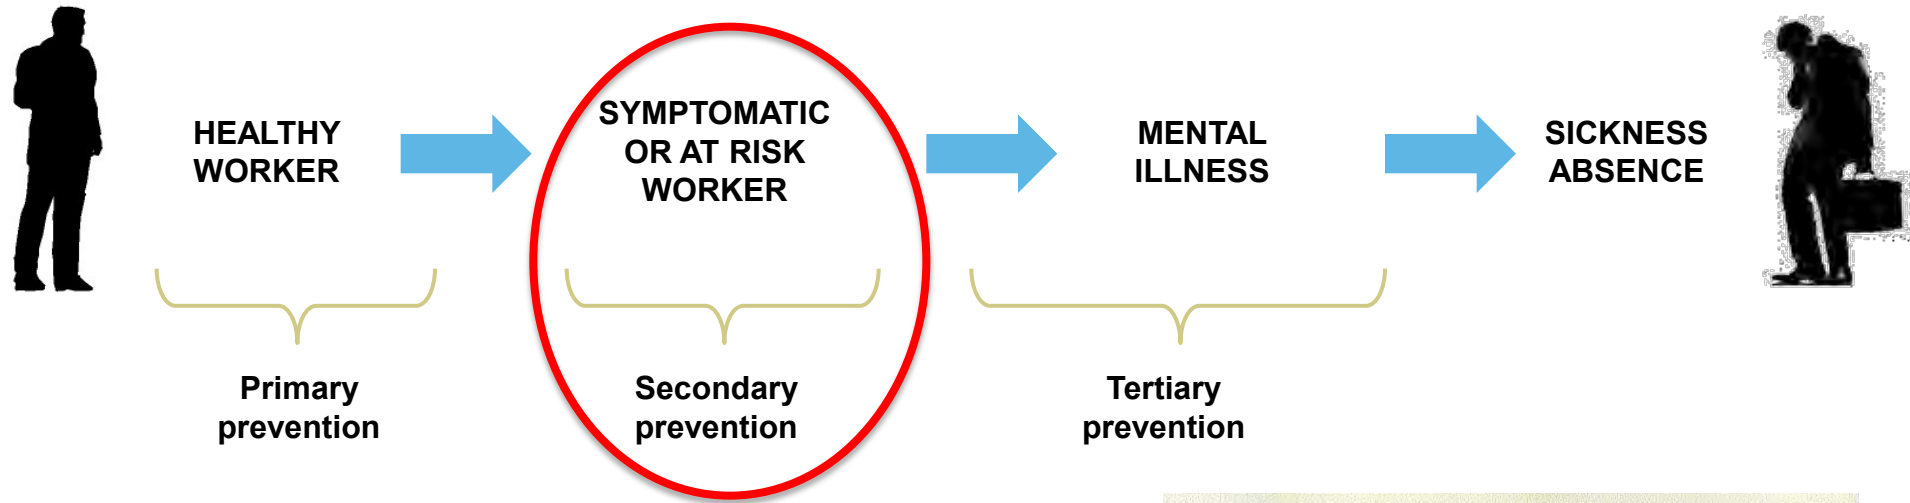

Men

40 years old
Does not actively care for someone
Has freedom to decide at job
Does 3 or more times physical activity per week
Drinks 2 times per week
Without past history of common mental disorders
Satisfaction with health (0–10): 8
Satisfaction with neighbourhood (0–10): 8
Satisfied with his partner
Satisfied with the way tasks are divided at home
Has someone to confide on
Does not feel pushed around
English as a first language
Risk: 0.049 (4.9%)

30 years old
Does not actively care for someone
Does not have freedom to decide at job
Does not do 3 or more times physical activity per week
Does not drink
Without past history of common mental disorders
Satisfaction with health (0–10): 7
Satisfaction with neighbourhood (0–10): 8
Does not have a partner
Lives alone (does not have to divide tasks at home)
Has someone to confide on
Does not feel pushed around
English as a second language
Risk: 0.125 (12.5%)
He increases physical activity, feels better and also increases his satisfaction with health (8)
New risk: 0.076 (7.6%)

Development of evidence-based workplace interventions for first responders in NSW

- Psychoeducation (needs to be done correctly)
- Wellbeing checks (still researching)
- Manager mental health training

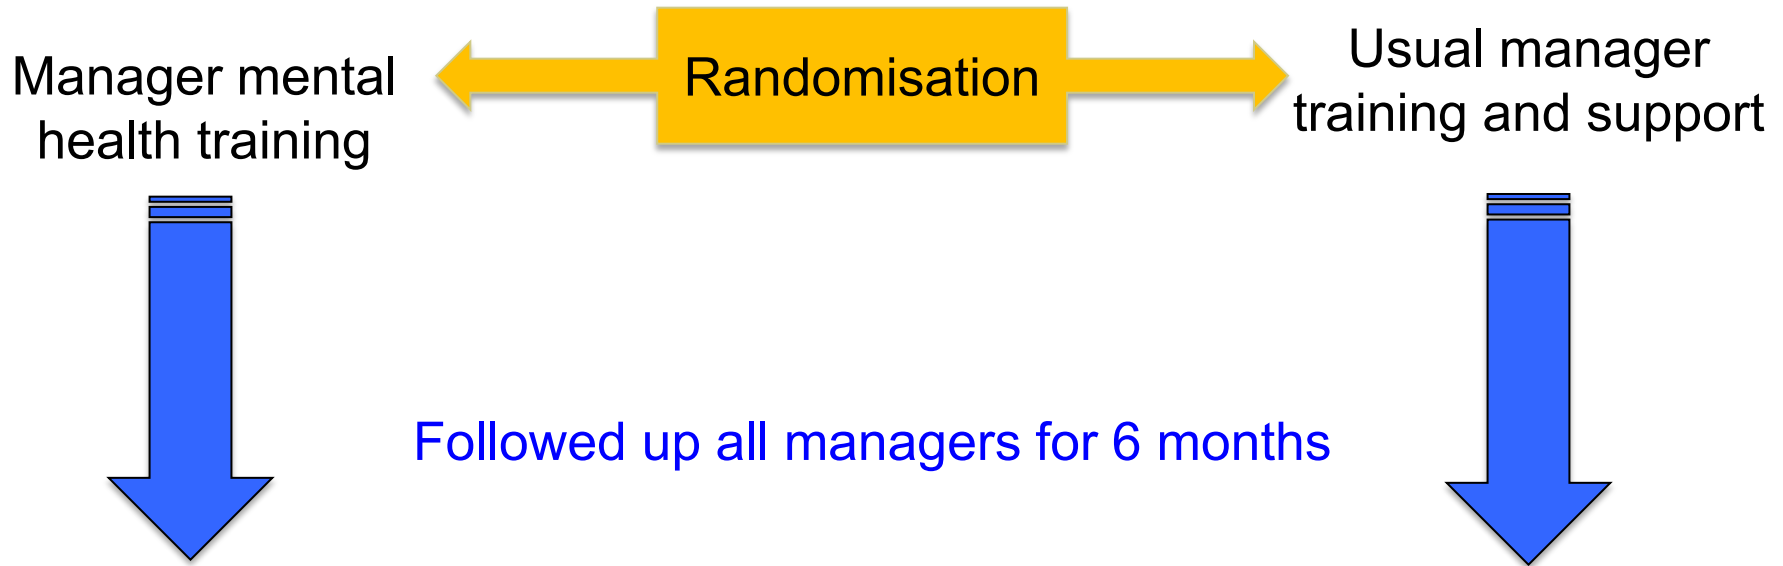

RESPECT Manager Training

- Aims to:
 - Increase mental health literacy
 - Build managers' skills and confidence in communicating with employees suffering from mental illness
 - Provide guidance on manager's role during employee sickness absence
- Rolled out as a randomised control trial – provides the highest level of evidence
- Training delivered by the Black Dog Institute
- Funding from EML

128 Duty Commanders

- **Confidence in dealing with stress or mental health matters amongst staff**
- **Change in behaviour towards staff**
- **Change in levels of sickness absence amongst those they manage**

128 Duty Commanders

▪ Confidence

YES – those who got the mental health training had significant increase in confidence that was still present after 6 months ($p < 0.05$)

Change in behavior towards staff

YES – those who got the mental health training much more likely to contact staff who were absent due to mental health problems ($p < 0.05$)

128 Duty Commanders

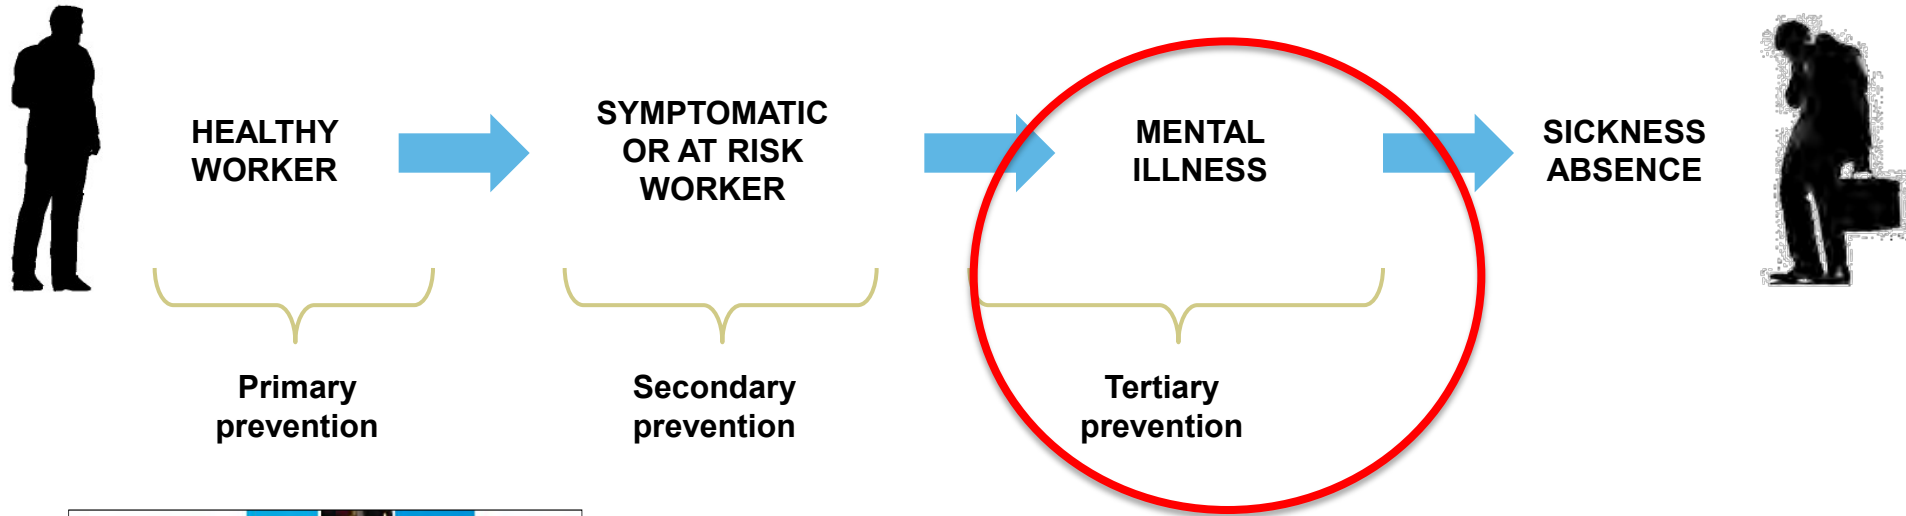

- **Change in levels of sickness absence amongst those they manage**

YES– 15% reduction in workers compensation leave (p=0.03, but not in all models)

Return on Investment \$10 for each \$1 spent

THE LANCET
Psychiatry

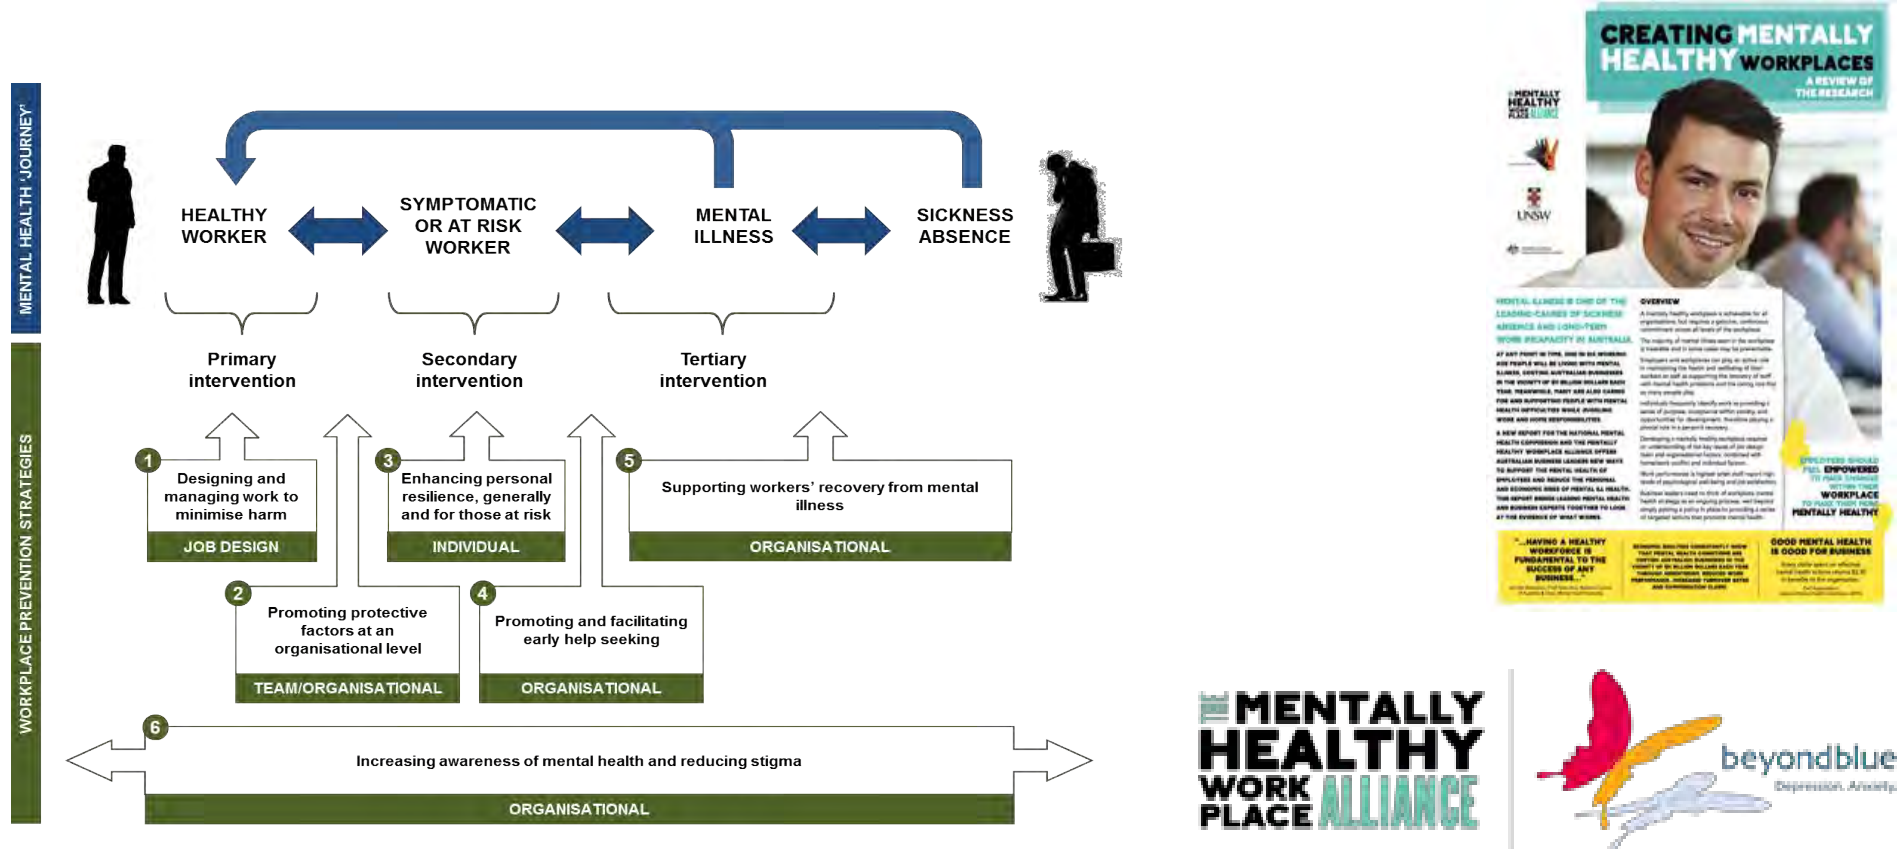

Development of evidence-based workplace interventions for first responders in NSW

- World first guidelines for how PTSD should be diagnosed and treated in first responders
- Endorsed by the Royal Australian and New Zealand College of Psychiatrists
- Material being developed for both clinicians and emergency service workers

What does this mean for other types of workplace and other industries?

1. Example of how an evidence-informed framework can be used

A number of evidence-based or evidence-informed strategies were identified for each of these domains:

HEALTHY THE FUTURE STATE

AON HEALTH SYMPOSIUM 14 SEPTEMBER 2017

1. **Designing and managing work to minimise harm** - enhance flexibility around working hours and encourage employee participation, reducing other known risk factors and ensuring the physical work environment is safe

Each of the interventions / training programs developed has now been adapted for other workplaces

- Resilience training
 - www.rawmindcoach.com
- RESPECT manager training
 - Face to Face via Black Dog Institute
 - Working with beyondblue to develop online version of manager training

> Hi John

You're currently completing the topic **Helping Employees**
Your next module is:

GET STARTED >

COMMON MENTAL ILLNESSES

- 1. Stigma and its effects
- 2. The workplace and its people

HELPING EMPLOYEES

- 1. Identifying People at Risk
- 2. Having the Talk
- 3. Providing Support
- 4. Facilitating Help Seeking
- 5. Modifying work to help recovery
- 6. Returning to Work

MINIMISING HARM

- Respectful & Responsible Managers
- Managing and Communicating
- Managing Individuals within a Team
- Managing Difficult Situations

> Hi John

- 2. The workplace and its people

HELPING EMPLOYEES

- 1. Identifying People at Risk

Hi Bridget

You're currently completing the topic **MINIMISING HARM IN THE WORKPLACE**

Your next module is **Managing and Communicating Existing and Future Work**

[GET STARTED >](#)

COMMON MENTAL ILLNESSES

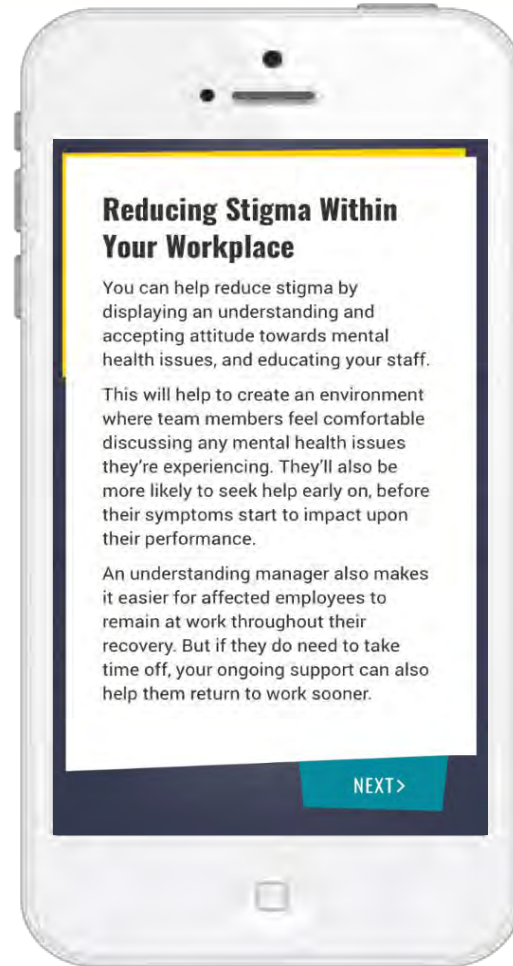

- 1. Recognising Mental Health Issues
- 2. The Workplace and its People
- 3. Your Turn

HELPING EMPLOYEES YOU'RE CONCERNED ABOUT

- 1. Identifying People at Risk
- 2. Providing Support
- 3. Having the Talk
- 4. Facilitating Help Seeking
- 5. Modifying Work to Help Recovery
- 6. Returning to Work
- 7. Your Turn

MINIMISING HARM IN THE WORKPLACE

- 1. How to be a Respectful & Responsible Manager
- 2. **Managing and Communicating Existing and Future Work**

Reducing Stigma Within Your Workplace

You can help reduce stigma by displaying an understanding and accepting attitude towards mental health issues, and educating your staff.

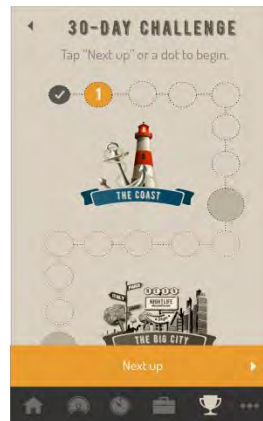

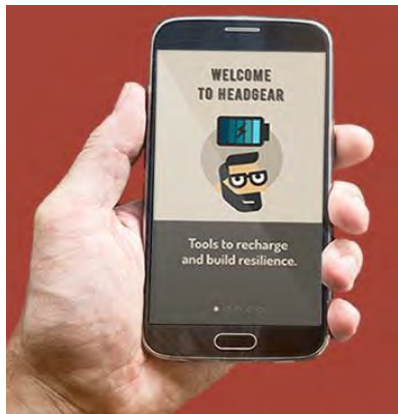

This will help to create an environment where team members feel comfortable discussing any mental health issues they're experiencing. They'll also be more likely to seek help early on, before their symptoms start to impact upon their performance.

An understanding manager also makes it easier for affected employees to remain at work throughout their recovery. But if they do need to take time off, your ongoing support can also help them return to work sooner.

[NEXT >](#)

What we are developing next...

WELL@WORK

- Developing new smartphone app in partnership with beyondblue
- Allow workers to screen themselves for mental health symptoms and risk
- 30 day 'mental health challenge'
- Allows workers to have total control over the process
- World first RCT just commenced
- Next step – linkage to manager training, activity monitoring, etc

- Randomised Controlled Trial

User comments

“Thank you for the opportunity to use the app. It has been of great benefit to me enabling me to see patterns and assisting me to change to a more positive mood which has helped with not only my mental health but my physical health as well. Thanks.”

“The app was great for me and it had lots of useful tools that I can go back to. It gave me a sense of control that motivated me to keep trying and that made me feel good. Having it all there in an app was nice to help me with my skill set of improving my mental wellbeing. Thank you. This app should be available to everyone. The value driven action was a great one to put my life into more perspective.”

“I went to see my GP after monitoring my mood - I has realised how down I was feeling until I was tracking it with the app - I feel better for getting some help”

“This app came at the right time. Saved me , as I was going off the rails big time. Very helpful. Thank you.”

Aon Medical Malpractice Claims Insights within private hospitals in Australia

Ken Corcoran Health Practice Leader – Pacific
Aon Risk Solutions

Private Hospital Facts

- **Nearly half of Australian hospitals are private.**
In 2014-15 there were **1322** hospitals in Australia, **624** of which were private.
(AIHW, 2014-15, p3)

- **1 in 3 hospital beds are private.**
There were **92,100** hospital beds in Australia, about **32,000** were private hospital beds and chairs. (AIHW, 2014-15, p4)

- **Nearly 1 in 3 (32%) patient days occur in private hospitals.**
In 2014–15, there were **28.8 million** patient days in Australia, **9.39 million** of which occurred in private hospitals. (AIHW, 2014-15, p16)

Total Number of Claims Per Year (10 year period) (14 hospital groups)

Number of claims

Average number = 459

Average Cost of Claims Per Bed Per Year (14 hospital groups)

Total Average Claims Cost Per Bed
